

SKIN ANTIOXIDANT

Oxidative stress – triggered by factors like sun exposure, pollution, or internal imbalances – plays a central role in skin concerns such as premature aging and acne.³

When the skin is overwhelmed by reactive oxygen species (ROS), it leads to cellular damage that accelerates photoaging (uneven pigmentation, elasticity reduction, skin dryness, wrinkles formation^{4,6}) and contributes to inflammation and breakouts.

Emotion® is a next-generation premium glutathione that delivers powerful intracellular support. By helping neutralize harmful molecules from within, it can protect skin cells at the source – promoting a clearer, smoother, and visibly healthier complexion over time.

Emotion® is clinically proven to be **directly absorbed and transformed inside cells into active glutathione**. It precisely improves the active glutathione ratio in red blood cells – a key marker of long-term antioxidant defense – helping the skin better withstand stress like sun exposure and internal imbalance.¹

SUPERIOR BIOAVAILABILITY & STABILITY

Form matters.

Emothion® (S-acetyl-glutathione) resists digestion, is absorbed intact, and activates directly in cells for higher efficacy at lower doses.¹

emothion®

SKIN BRIGHTENING AND GLOW

Emothion®'s unique molecular structure influences melanin synthesis and skin hydration.²

SKIN ANTIOXIDANT

Emothion®'s helps detoxify the skin from UV-induced ROS and acne caused by oxidative stress.^{3,4}

SKIN BRIGHTENING AND GLOW

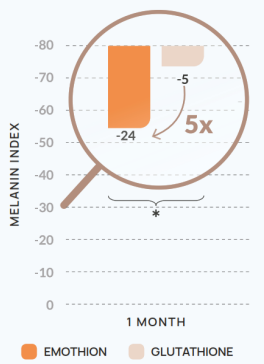

SKIN BRIGHTENING

The amount of melanin, our natural pigment responsible for skin, eyes, and hair color, determines the intensity of the pigmentation, with higher melanin levels resulting in darker skin tones.

PHEOMELANIN → EUMELANIN

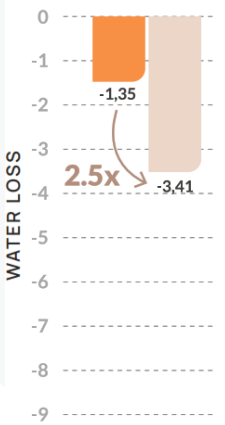

emothion®
promotes the production of pheomelanin, the lighter of the two types of melanin.³

Emothion® decreases melanin score 5x more than Glutathione, after only 1 month of supplementation, resulting in fast skin brightening effect.²

SKIN GLOW & HYDRATION

TransEpidermal Water Loss (TEWL) indicates skin barrier function. Lower TEWL reflects skin hydration, elasticity, evenness, and overall glow.⁵

EMOTHION GLUTATHIONE

Emothion® shows a positive and 2.5x superior trend compared to Glutathione in maintaining skin hydration after 1 month.²

- 5x More than Glutathione, Emothion® shows skin brightening effect in just 1 month.
- 2.5x Lower Emothion® daily dose vs. Glutathione.
- 1 Month to observe skin brightening, optimal hydration effects, and overall skin glow.
